From First Advance to Intelligent Portfolio

Merchants.
Better decisions.
Lasting insight.

A governed platform that connects merchant evidence, financing decisions and the account that follows.

01 / EVIDENCE

Understand the business

Sales, liquidity and obligations; the terms being requested.

MERCHANT + REQUEST

A complete view of the business behind the request.

02 / DECISION

Find permissible terms

Compare structures within credit, economic and authority limits.

GOVERNED DECISION

Support, risk and authority aligned from the start.

03 / OPERATIONS

Follow the funded account

Monitor, route permitted action, reconcile events and balances.

ACCOUNT LIFECYCLE

Only the authorized, funded path continues.

04 / INTELLIGENCE

Explain the portfolio

Trace portfolio outcomes back to decisions and account evidence.

PORTFOLIO INTELLIGENCE

Certified source insight for performance, risk and impact.

Structure the opportunity. Govern the decision. Follow the account.

DEMONSTRATED SYNTHETIC SCOPE

750 synthetic merchants
Two alternative scenarios

6,519 reportable structures
Across 1,500 application-scenario paths

15,600 monitoring rows
130 funded paths × 120 days

THE BUSINESS BEHIND THE REQUEST

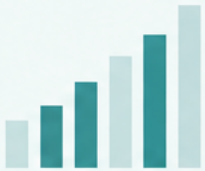

A sale is a signal. Not an underwriting decision.

Sales, cash flow, commitments and financing burden answer different questions—and must be read together.

01
SALES

Merchant evidence

What is coming in?

- POS sales
- Settlements
- Deposits
- Seasonality

Shows business activity and demand, not the full ability to pay.

≠

02
CASH FLOW

Cash after commitments

What is already committed?

- Eligible sales × policy margin
- Fixed obligations
- Sales-linked obligations
- Proposed financing burden

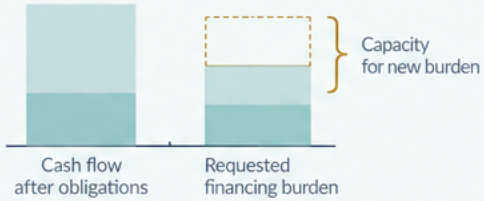

Tests remaining cash and the modeled liquidity buffer.

≠

03
CAPACITY

Requested financing burden

Which terms fit the business?

Tests burden, liquidity, risk and modeled economics together.

Conceptual relationships—not measured proportions.

Evaluate terms against merchant capacity—not sales volume alone.

SAME EVIDENCE.
A CLEARER DECISION.
A STRONGER PORTFOLIO.

One merchant story. Connected from end to end.

Acquisition context, evidence, decisions and account results belong in the same system.

A MERCHANT-CENTERED DECISION SYSTEM

WHY CONNECTEDNESS MATTERS

Inputs shape the structure.

Acquisition context, evidence, capacity and risk define permissible terms.

Authority governs the decision.

A supportable structure may still require review before authorization.

The account retains its evidence.

Once funded, the account carries the original decision context and evidence.

Management can trace the result.

Portfolio outcomes trace back to the decision and the merchant evidence behind it.

Evaluate the request in context—not in isolation.

Search the structure. Not just the verdict.

An unsuitable request does not prove that no permissible alternative exists.

6,519

reportable structures

Across the synthetic demonstration—not one case.

CONSTRUCT → TEST → APPLY AUTHORITY

01

CONSTRUCT / M2.2

Build linked terms.

Specify amount, remittance, payback and horizon within permissible ranges.

Amount	Remittance	Payback multiple	Horizon
Advance dollars	Sales-linked share	Repayment target factor	30 / 60 / 90 days

02

TEST / M2.2

Recalculate credit + economics.

Assess capacity, resilience, comparative loss, costs and contribution.

03

DECIDE / M2.3

Apply final authority.

Apply strict or review-eligible conditions and matched-scenario constraints.

ACTUAL SYNTHETIC CASE / MERCHANT 098

$5,200 requested in each scenario.

BASELINE

$5,200

Requested amount authorized

Remittance rate	10.9032%
Horizon	90 days

RECESSION ENERGY

$2,500

Counter-offer authorized

Remittance rate	10.9032%
Horizon	90 days

Matched alternatives—not sequential offers.
Selected amounts, remittance rates and horizons shown.
Search schematic—not this merchant's complete candidate set.

GUARDRAILS (APPLIED ACROSS THE SEARCH)

40%	60%	30 / 60 / 90	Required
Minimum amount / request	Maximum amount reduction	Permitted horizons in days	Economic hurdle + stress floor

Finding a structure is not permission to fund it.

A reviewable alternative is a distinct outcome—not hidden approval volume.

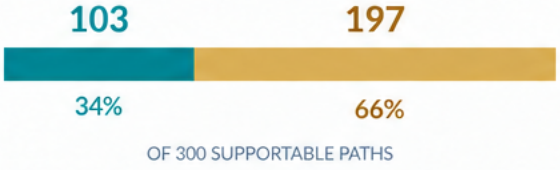

Broader structural opportunity does not mean hidden approval volume.

BASELINE • 750 APPLICATIONS

300

supportable paths

Paths with a supportable requested or alternative structure. Final authority remains separate.

- Authorized — 103 paths
- Review required — 197 paths

SYNTHETIC MERCHANT 082 • BASELINE

$53,800 requested → **$31,200** selected structure

COUNTEROFFER_REVIEW_REQUIRED

REVIEW GATES

- HUMAN_JUDGMENT — Underwriter review
- R1_CAPACITY_COMPOSITE — Composite capacity review

GOVERNED FINAL TERMS

13.0606%	60 days	$39,164.30
remittance rate	horizon	total repayment

SEVEN GOVERNED OUTCOMES

AUTHORIZED
- Approve as requested
- Counteroffer authorized

REVIEW
- Counteroffer review required
- Manual underwriting review

DECLINE
- Insufficient evidence decline
- No feasible structure
- Policy hard stop

Evaluate the request in context—not in isolation.

The decision is only the beginning.

An authorized, funded path carries its evidence into daily operations.

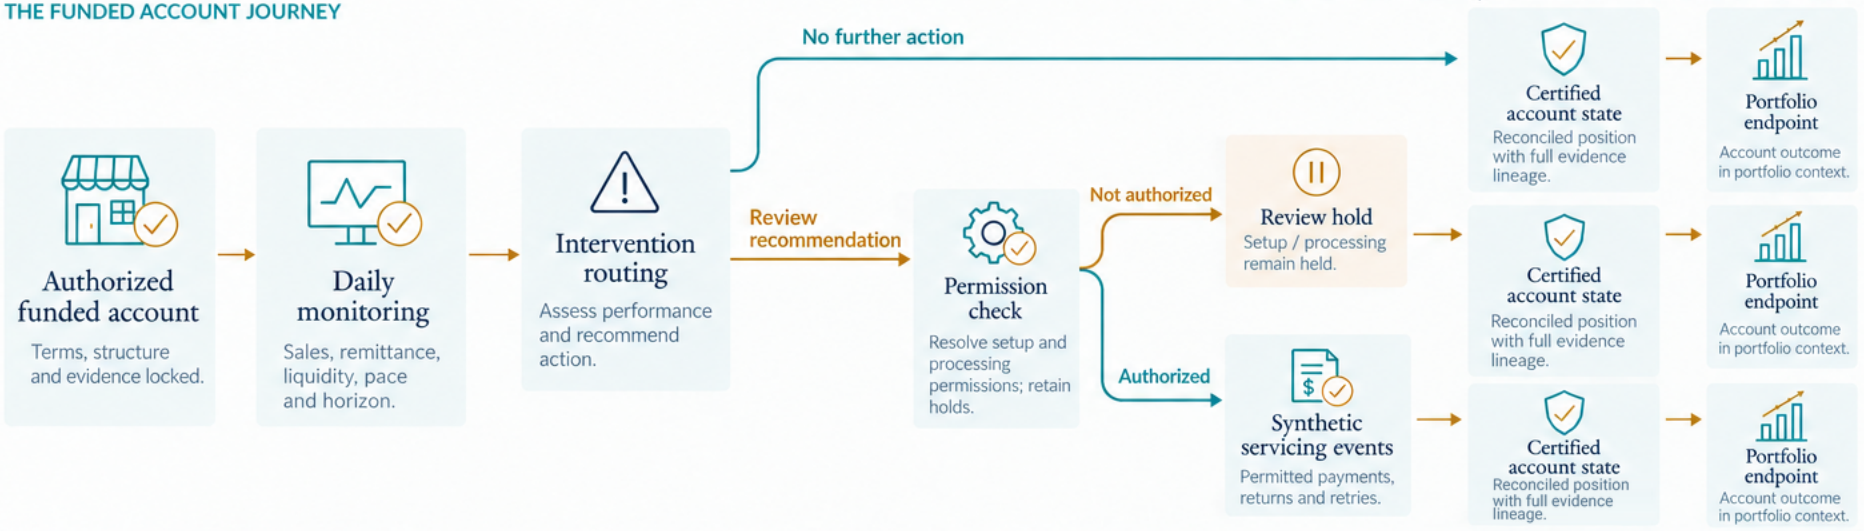

15,600

daily monitoring rows

130 funded scenario paths × 120 days

Summarized source relationships — not a calendar of real transactions.

THE FUNDED ACCOUNT JOURNEY

PORTFOLIO END STATES

130 funded scenario paths across two alternative scenarios.

126 **Paid off**
Reconciled • no further action

3 **Review holds**
Setup / processing remain held

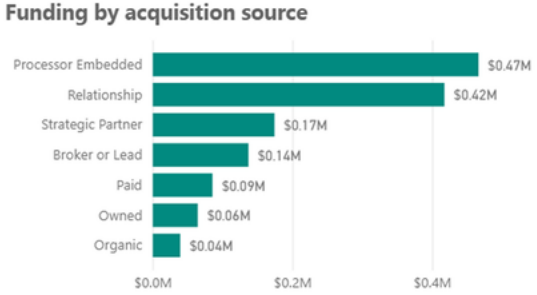

1 **Active, reconciled**
Permitted setup + execution

Preserve the account story: payment events ↔ permitted actions ↔ remaining balance.

From operating facts to executive decisions.

Two management questions. Visible evidence from the actual Power BI view.

01 / WHERE IS FUNDING CONCENTRATED?

P01 Baseline • original screenshot detail • synthetic-forward: 22 Nov 2026

02 / WHAT REMAINS AT ENDPOINT?

Endpoint status

Reconciled paths **103**	Ending exposure **$6.06K**	Variance **$0.00**
Exceptions **0**	Open servicing **4**	Review holds **3**

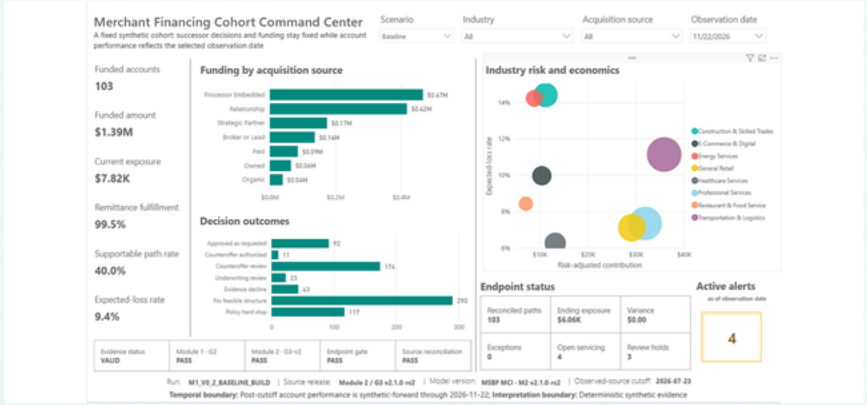

Active alerts

as of observation date

4

P01 Baseline • original screenshot detail • synthetic-forward: 22 Nov 2026

Full P01 view • source locator

G3-v2 certifies source consumption.

G3-v2 certifies the source-consumption boundary. Power BI implementation has separate acceptance evidence.

Power BI is an analytical view.

It presents source-certified facts. Financing decisions remain in the source engine.

Same evidence. Different questions.

Two examples of management questions supported by the retained view.

PROOF BEFORE SCALE

Same merchants. A different financing picture.

750 merchants in each alternative scenario. Different authorized subsets.

BASELINE

13.7% final-offer authorization

103 / 750 applications

103 authorized | 647 review or decline

Synthetic funding	**$1,385,300**
Modeled risk-adjusted contribution	**$147,981**

RECESSION ENERGY

3.6% final-offer authorization

27 / 750 applications

27 authorized | 723 review or decline

Synthetic funding	**$344,200**
Modeled risk-adjusted contribution	**$30,032**

Scenario sensitivity changes the selected funded subset and resulting financing picture.

Same 750-application scale. Alternative scenarios—not a time series.
Modeled contribution is rounded to dollars, not realized profit or ROI; funded subsets differ.

A disciplined foundation. An ambitious horizon.

Connect each next capability to the business question it would help answer.

01 / CURRENT TECHNICAL DELIVERY

ACCEPTED SYNTHETIC DEMONSTRATION

Explain the decision.

An accepted technical foundation for governed merchant financing.

Module 1 / G2

ACCEPTED FOUNDATION

- Merchant evidence and cash-flow capacity
- G2 consumption contracts

Module 2 / R26

ACCEPTED WITH OBSERVATIONS

- Governed financing decisions
- Synthetic account lifecycle

Power BI R3 / R7

ACCEPTED (P01 – P04)

- Portfolio reporting and monitoring
- P01, P02, P03, P04 delivered

EXAMPLE BUSINESS QUESTION

What can this merchant and structure support?

02 / PREPARATION & DEVELOPMENT

IN DESIGN • UNDER DEVELOPMENT

Broaden the comparison.

Extend the platform to scale analysis and deepen portfolio insight.

Campaign Scale

PLANNED SCALE PROGRESSION

Scale the evidence base and testing across larger synthetic cohorts.

750 Replay target → 2,500 Expansion target → 25,000 Scale target

Module 3

DEVELOPMENT

- Enterprise portfolio intelligence
- Static development and preparation
- Separate execution and acceptance gates

EXAMPLE BUSINESS QUESTION

How do results vary across cohorts and portfolio segments?

03 / CONCEPTUAL HORIZON

CONCEPTUAL • YEAR 5+

Explore the portfolio ahead.

Aspirations—not delivered features or committed dates.

Enterprise forecasting
Predict portfolio outcomes under multiple scenarios.

Scenario planning
Test macro, sector and merchant stress scenarios.

Allocation
Guide capital to highest expected value across segments and products.

Relationship and lifecycle insight
Track merchant evolution and next best actions.

Governed portfolio learning
Capture outcomes to continuously improve decisioning.

EXAMPLE BUSINESS QUESTION

What could forecasting and scenario planning reveal?

Better financing starts with better-connected decisions.

From a merchant request to an accountable portfolio: a *system people* can understand and examine.

Merchant request

Merchant business context and requested terms.

Governed structure

Permissible terms within credit, economic and authority limits.

Final authority

Authorized outcome with clear rationale and evidence.

Funded lifecycle

Monitor, route permitted action, reconcile events and balances.

Explainable portfolio insight

Trace outcomes back to decisions and account evidence.

TRACE EVIDENCE • INFORM HUMAN REVIEW

Structure the opportunity.

Find permissible terms that fit the business and the boundaries.

MORE OPTIONS. STRONGER DECISIONS.

Govern the decision.

Separate support from authority with clear evidence and rationale.

RIGHT DECISIONS. LASTING CONFIDENCE.

Explain the portfolio.

Connect results to the decisions and account evidence behind them.

GREATER CLARITY. GREATER OVERSIGHT.

Andrew R. Goad

Credit strategy • Analytical architecture • Accountable execution

What decision does your organization need to make better?
