MSBF MERCHANT CREDIT INTELLIGENCE

Power BI Validation Report

MSBF Merchant Credit Intelligence - Module 2 v2.1.0-rc2

Decisioning, Portfolio & Servicing Intelligence

Document ID	MSBF-MCI-PBI-VAL-R2
Product release	Module 2 v2.1.0-rc2
Document date	September 4, 2026
Status	PASS - CONTROLLED PUBLICATION ACTION PENDING
Evidence boundary	Deterministic synthetic evidence; not production underwriting or servicing

Publication-support artifact. GitHub publication and public supersession are not executed by this document.

Contents

The complete requirements and validation traceability are provided in the companion workbook and CSV registers.

Post-audit focused correction - IA-D-R16-PBI-001

Independent Audit decision IA-D-R16-PBI-001 returned HOLD for one localized P04 visual-filter defect only. The correction removed FactAccountDaily[monitoring_status_rank] >= 1 and FactMonitoringEndpoint[P04 Monitoring Status] <> "Paid off" from P04 visual 36e098c177fe1ff70689 (Payment & certification detail). The successor R26 P04 Requires Attention Flag = 1 predicate remains physically present.

The corrected client PBIX is 27,635,305 bytes with SHA-256 ca46e8551860836a0cf4ff9239c42fcf8df02f1705596b9f8ca1bd047b5294e4. The embedded DataModel SHA-256 remains 24396d02c0fbcb782cc9918e842886711146b8ff9455c8822d2aeaf009b96061, exactly unchanged from the audited R2 candidate.

Complete physical visual-JSON scan including filterConfig: 96 visuals, 293 field-reference occurrences, 26 filterConfig rows, 3 active predicates, 0 predecessor-fact references, and 0 predecessor-fact filter rows.

Correction boundedness: only four PBIX members changed. The target P04 visual and Endpoint monitoring posture visual are unchanged outside filterConfig. The second visual change is benign Desktop serialization of current/shared field references with no active predicates; pages.json changed only the saved active page; SecurityBindings changed as save metadata.

Owner evidence signoff: the owner observed no visual or numerical change after the stale-filter removal and expressly approved reuse of the existing P04 Baseline, Recession Energy, filtered-account, tooltip, accessibility, and QA captures without re-capture.

Focused re-audit scope

Verify the corrected PBIX identity and target filterConfig, independently scan all physical visual JSON including filterConfig for predecessor-fact references, reconcile the updated hashes/registers/persistence receipt, and confirm the owner no-recapture signoff. Do not reopen R26, G3-v2, P03 1,500-path QA, broad semantic testing, or duplicate screenshot capture absent a newly demonstrated regression.

18. Evidence and publication-package validation
19. Findings and observations

20. Release recommendation
Appendix A - Validation summary
Appendix B - Full control register
Appendix C - Companion evidence and registers

1. Executive validation conclusion

The current **MSBF Merchant Credit Intelligence** Power BI release candidate is validated as a coherent, source-authorized, deterministic synthetic analytical product across its current P01-P04 scope.

The validation established that:

- the client-facing PBIX is physically readable and hash-identified;
- the report contains the intended four visible pages and one hidden diagnostic;
- every current page binding resolves to an R1 successor fact or a current shared dimension/metadata object;
- no predecessor fact remains bound to P01-P04 or P02-DIAG;
- accepted R26 source populations and G3-v2 certification are preserved;
- P03 narrative behavior passes across all 1,500 application-scenario paths;
- P03 monitoring and funded-lifecycle behavior reconciles across 130 funded paths and 15,600 monitoring rows;
- P04 preserves exact 130-key equality through intervention, setup, execution, certification, and endpoint performance;
- scenario isolation, interactions, tooltips, alt text, and tab order operate as designed;
- the report's temporal, synthetic, and nonproduction interpretation boundaries are visible and consistent.

The final portfolio-wide persistence/nonregression gate has been closed as **PASS** based on owner-confirmed post-reopen final evidence. One release control remains open by design: GitHub publication and public supersession have not been executed and require a separate controlled release action.

Accordingly, the report is **accepted as the final rc2 publication candidate for audit and controlled publication handoff**, but this validation report does not declare the artifact publicly released or production-ready.

2. Validation objectives

The validation was designed to determine whether the current PBIX:

1. matches the accepted product and release identity;
2. consumes the accepted R26 successor source architecture;
3. excludes predecessor fact bindings;
4. preserves exact source populations, keys, and scenario boundaries;
5. implements the approved P01-P04 business story;
6. presents accurate and interpretable KPIs, charts, tables, narratives, and tooltips;
7. maintains correct filter and selection behavior;
8. retains accessibility and navigation controls;
9. contains no unresolved page-level semantic defect;
10. is suitable for GitHub publication support with persistence/nonregression closed and the separately authorized publication action pending.

3. Scope

Included

- Physical PBIX package
- Embedded report definition
- Four visible pages and one hidden diagnostic
- Current report bindings and interactions
- Current R1 source populations
- P01 and P02 page conformance
- P03 narrative, monitoring, lifecycle, and servicing integration
- P04 endpoint monitoring, servicing, payment, and certification integration
- Tooltips, alt text, and tab order
- Owner evidence organization

- Requirements and validation traceability
- Release-boundary review

Excluded

- P05 and P06 page acceptance
- Power BI Service deployment
- Tenant, workspace, gateway, or scheduled refresh validation
- Production performance/load testing
- Real customer data, underwriting, payment, or servicing execution
- GitHub release execution

4. Validation authority and evidence hierarchy

Validation used the following precedence:

1. accepted R26 M2.5-M2.12 / G3-v2 technical authority;
2. current client-facing PBIX and physically installed DAX;
3. extracted report definitions, pages, visuals, bindings, and interactions;
4. owner-captured final page, QA, tooltip, accessibility, and interaction evidence;
5. canonical implementation register and source-population records;
6. derived validation analysis and publication documentation.

No external facts were used to change or supplement the source-defined results.

5. System under test

Attribute	Validated value
File	MSBF_Merchant_Credit_Intelligence_M2_v2.1.0-rc2.pbix
Bytes	27,635,305
SHA-256	ca46e8551860836a0cf4ff9239c42fcf8df02f1705596b9f8ca1bd047b5294e4
DataModel bytes	27,485,797
DataModel SHA-256	24396d02c0fbcb782cc9918e842886711146b8ff9455c8822d2aeaf009b96061
PBIX entries	128
Visible pages	4
Hidden pages	1
Visual containers	96
Query bindings	221
Observed-source cutoff	2026-07-23
Synthetic lifecycle endpoint	2026-11-22

6. Validation methodology

The validation combined:

- direct ZIP/CRC and path inspection of the PBIX;
- extraction and hashing of embedded report definitions;
- page, visual, binding, field-reference, interaction, and DAX-query inventories;
- comparison to the previously controlled R4 canonical register;
- review of owner-confirmed measure and calculated-column changes;
- automated DAX QA for P03 and P04;
- full-page visual evidence under both scenarios;
- representative account-level regressions;
- tooltip, alt-text, tab-order, and interaction evidence;
- explicit review of synthetic, temporal, and release boundaries.

Controls were classified as:

- **PASS** - requirement satisfied by direct test, QA, or approved evidence;
- **DEFERRED** - required but intentionally scheduled for the final portfolio gate;
- **PENDING** - requires a separately authorized release action.

7. Physical package validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-PHY-001	PBIX ZIP CRC	PASS	PASS	PASS	Direct PBIX testzip
VAL-PHY-002	Unsafe/duplicate/ case-colliding paths	0 / 0 / 0	0 / 0 / 0	PASS	Direct PBIX path inspection
VAL-PHY-003	Client-facing visible pages	4	4	PASS	Embedded pages.json
VAL-PHY-004	Hidden diagnostic pages	1	1	PASS	Embedded P02-DIAG page.json
VAL-PHY-005	Client-facing PBIX identity, size, and SHA-256	MSBF_Merchant_Credit_Intelligence_M2_v2.1.0-rc2.pbix; 27,635,305 bytes; ca46e855...94e4	Exact current client-facing release candidate	PASS	Direct project ZIP and PBIX hash inspection

Assessment

The client-facing PBIX passed CRC validation. No unsafe paths, duplicate paths, or case-fold collisions were identified. The embedded report definition contains the expected page structure, and the file identity matches the owner-approved market-facing name.

8. Governance and release-identity validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-GOV-001	R26 G3-v2 controls	70 PASS / 0 FAIL	70 PASS / 0 FAIL	PASS	R26 checkpoint and authority evidence
VAL-GOV-002	R26 certification ID	G3V2_R26_C053DC064AB32A4D21864F94	Exact accepted ID	PASS	R26 authority evidence

Control ID	Control	Observed	Expected	Status	Evidence
VAL-REL-003	Visible product/model identity	MSBF Merchant Credit Intelligence / MSBF MCI - M2 v2.1.0-rc2	Owner-approved market-facing identity	PASS	PBIX filename and P01-P04 final footers

The build retains the accepted 70/70 G3-v2 control result and exact certification ID. The visible product identity has been changed from internal R26/C2 engineering nomenclature to the market-facing MSBF MCI identity without changing technical lineage.

9. Source-population validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-SRC-001	Application-scenario paths	1,500	1,500	PASS	R1DimApplicationScenario
VAL-SRC-002	Daily monitoring rows / paths / days	15,600 / 130 / 120	15,600 / 130 / 120	PASS	P03 operational QA result 1
VAL-SRC-003	M2.6 intervention distribution	126 / 3 / 1	126 / 3 / 1	PASS	P03 operational QA result 4

Key populations were reconciled as follows:

Object or stage	Validated population	Result
Application-scenario dimension	1,500 paths	PASS
Funded lifecycle	130 unique paths	PASS
Daily monitoring	15,600 rows / 130 paths / 120 days each	PASS
M2.6 intervention	130 rows; 126 closed / 3 outreach / 1 temporary review	PASS
M2.7 operational setup	130 rows; 126 no setup / 3 governance review / 1 temporary setup ready	PASS
M2.8 servicing execution	130 rows; 126 no execution / 3 review hold / 1 active temporary processing	PASS
M2.9 certification	130 rows; 126 closed / 3 review hold / 1 reassessment after retry	PASS
M2.10 performance	130 rows; 126 closed stable / 3 controlled review / 1 active reconciled	PASS
G3-v2 certification	70 PASS / 0 FAIL	PASS

10. Semantic-model and binding validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-SEM-001	Successor-or-shared binding coverage and predecessor-fact exclusion	96 visuals; 293 physical field-reference occurrences; 26 filterConfig rows; 3 active predicates; 0 predecessor-fact references and 0 predecessor-fact filter rows	0 predecessor-fact references across all physical visual JSON, including filterConfig	PASS	CURRENT_PHYSICAL_VISUAL_REFERENCES_R7, CURRENT_PHYSICAL_FILTER_REFERENCES_R7, and PHYSICAL_VISUAL_REFERENCE_SCAN_SUMMARY_R7

Control ID	Control	Observed	Expected	Status	Evidence
VAL-SEM-002	Model inventory qualification	R4 exact base 55 tables / 1,804 columns / 316 measures / 55 relationships; R5 estimated 1,807 columns / 349 measures	Exact base plus explicitly qualified readable/owner additions	PASS	R4 canonical register plus R5 query overlays and owner changes

The current binding inventory establishes:

Page	Bindings	R1 successor	Shared dimension/metadata	Predecessor facts	Result
P01 - Cohort Command Center	49	39	10	0	PASS_PAGE_FROZEN
P02 - Cohort Lifecycle	49	39	10	0	PASS_PAGE_FROZEN
P02-DIAG - Attention States	33	26	7	0	HIDDEN_DIAGNOSTIC_RETAINED
P03 - Application Journey	55	42	13	0	PASS_PAGE_FROZEN
P04 - Servicing & Exceptions	35	29	6	0	PASS_PAGE_FROZEN

Assessment

The critical version-mixing defect family is closed for the current report scope. Following the R16 focused correction, P01-P04 and P02-DIAG contain zero predecessor-fact references across all physical visual JSON, including filterConfig. Shared non-R1 dimensions remain permissible where they are the current canonical category or metadata dictionary for R1 facts.

The model inventory remains qualified: the R4 exact base contained 55 tables, 1,804 columns, 316 measures, and 55 relationships. R5 readable overlays and owner changes support an estimated current total of 1,807 columns and 349 measures. Exact final DMV counts were not separately recaptured; the qualified inventory remains a nonblocking documentation observation because the owner has closed the final persistence/nonregression gate on the persisted PBIX.

11. P01 validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P01-001	P01 public page composition and final release identity	Command center present with KPI, sourcing, decision, industry, endpoint, alert, and evidence sections	Approved P01 page design	PASS	Focused P01 Baseline/Recession captures and binding inventory

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P01-002	Final-observation funded paths and endpoint state	Baseline 103 funded / $1.39M / $7.82K exposure; Recession Energy 27 funded / $344.20K / $0 exposure	Current accepted cohort results	PASS	Focused P01 Baseline and Recession Energy captures

Validated behavior

P01 provides the intended executive command center with:

- four segmentation/as-of controls;
- six core KPIs;
- funding by acquisition source;
- seven-outcome decision distribution;
- industry risk and economics;
- endpoint reconciliation and operational attention;
- visible evidence gates.

At the final observation date:

Measure	Baseline	Recession Energy
Funded accounts	103	27
Funded amount	$1.39M	$344.20K
Current exposure	$7.82K	$0.00
Remittance fulfillment	99.5%	100.0%
Supportable path rate	40.0%	10.7%
Comparative expected-loss rate	9.4%	11.4%

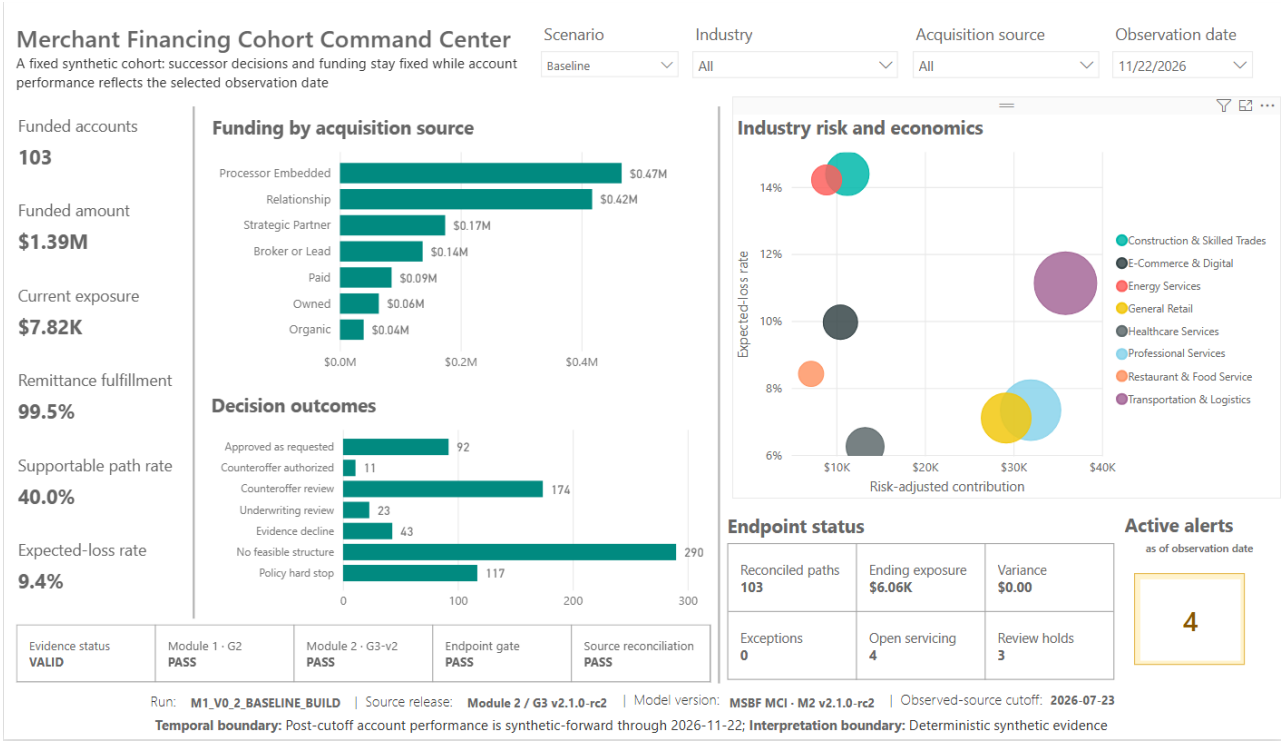

Figure: P01 Baseline

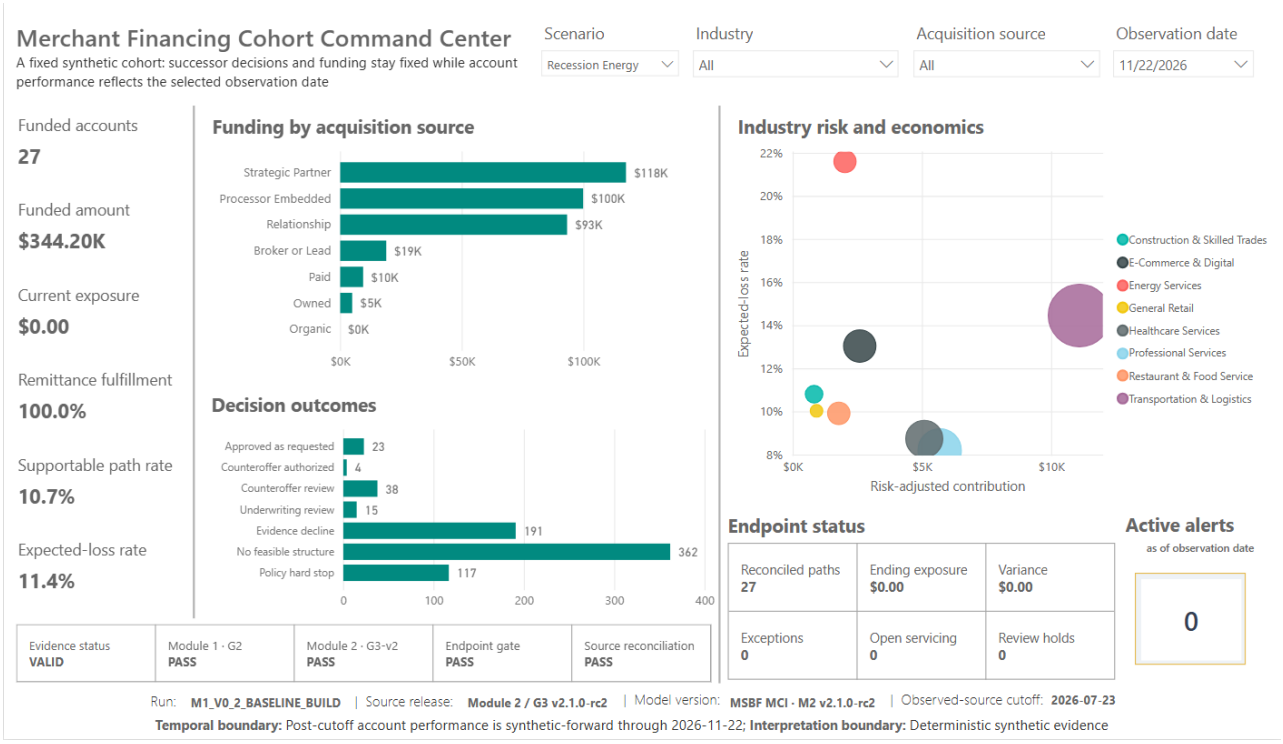

Figure: P01 Recession Energy

12. P02 validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P02-001	Lifecycle page composition	Receivable runoff, remittance fulfillment, monitoring breadth/severity, and payoff timing present	Approved P02 page design	PASS	Focused P02 Baseline/Recession captures and binding inventory

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P02-002	Observation-period and segmentation behavior	Scenario, industry, acquisition-source, and observation-period interactions evidenced	Approved interaction behavior	PASS	Owner P02 interaction and observation-period captures

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P02-003	Operational-alert diagnostic tooltips	Raw alert conditions, operational alert families, and per-alerted-account context evidenced	Approved tooltip design	PASS	Owner P02 tooltip capture

Validated behavior

P02 displays:

- receivable runoff;
- remittance fulfillment;
- monitoring breadth and severity;
- payoff timing versus plan;
- scenario, industry, acquisition-source, and observation-period interactions.

The current R26 monitoring design correctly distinguishes operational-alert breadth from adverse monitoring status. Tooltips provide source-owned raw-condition and alert-family detail. The hidden P02-DIAG page remains available for internal analysis and hidden from view mode.

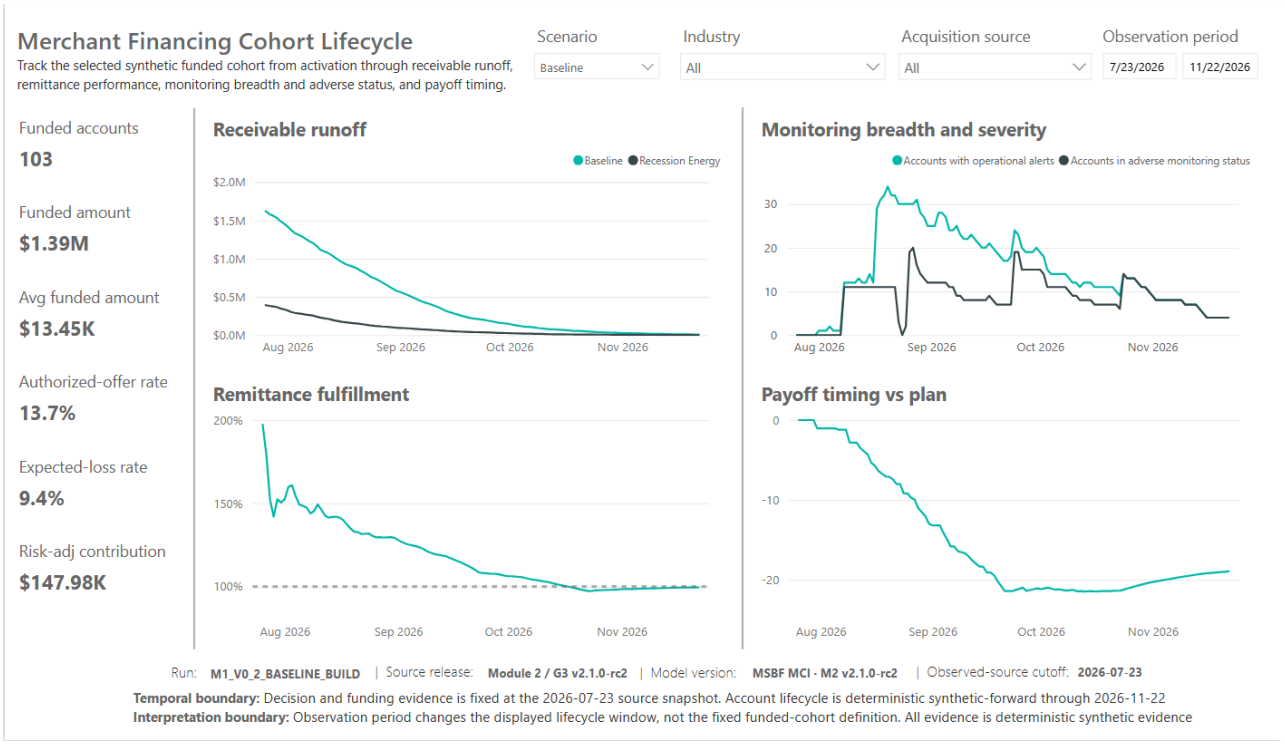

Figure: P02 Baseline

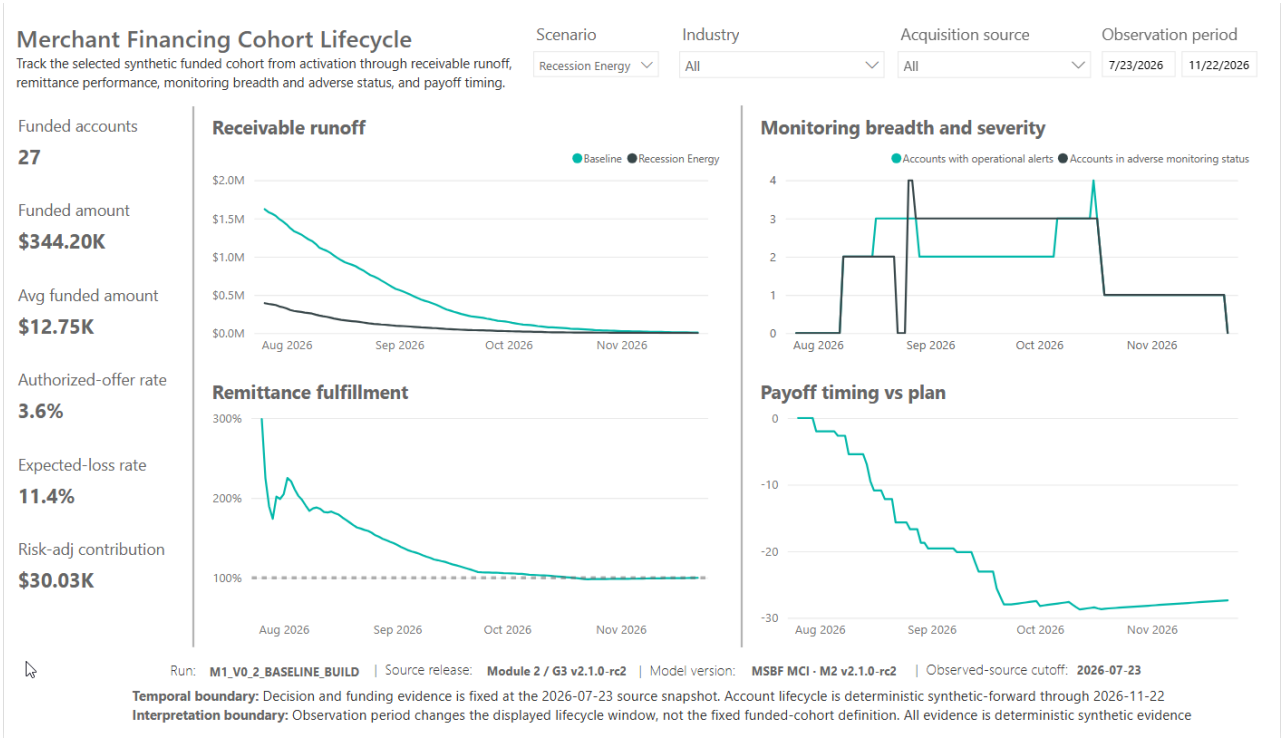

Figure: P02 Recession Energy

13. P03 narrative and application-journey validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-001	738 scenario pair	2 rows, both PASS	2 rows, both PASS	PASS	P03 narrative QA result 1

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-002	Narrative failures	0	0	PASS	P03 narrative QA result 2
VAL-P03-003	Full narrative inventory	1,500 rows; PASS only	1,500 unique paths; PASS only	PASS	P03 narrative QA result 3

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-004	Successor reconciliation failures	0	0	PASS	P03 performance/monitoring QA result 2

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-005	738 scenario pair	Baseline 120 monitoring rows; Recession Energy 0 rows	Exact isolation	PASS	P03 performance/monitoring QA result 3

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-006	Final P03 application-to-account page composition	Request, decision, proposed structure, three narratives, performance, monitoring, and servicing present	Approved P03 final design	PASS	Focused P03 branch captures and final page evidence

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-007	Final P03 alt text, tab order, account-performance and monitoring tooltips	Implemented and evidenced	Approved accessibility/tooltip design	PASS	P03 alt-text, tab-order, and tooltip captures

Narrative QA

The final corrected narrative sequence produced:

- **Result 1:** exactly two rows for merchant 738 Baseline and Recession Energy; both PASS;
- **Result 2:** zero failures;
- **Result 3:** 1,500 rows, 1,500 unique ApplicationScenarioKeys, PASS only.

The final visible architecture retains three separate narratives:

1. Merchant operating evidence
2. Risk & economics assessment
3. Decision

Technical source rationales remain available in the model but are not forced into visible or redundant tooltips.

Monitoring and lifecycle QA

The operational QA established:

- 15,600 monitoring rows;

- 130 application-scenario paths;
- exactly 120 monitoring days per path;
- zero successor reconciliation failures;
- merchant 738 Baseline with 120 monitoring rows and funded lifecycle;
- merchant 738 Recession Energy with zero monitoring rows and no lifecycle;
- M2.6 intervention distribution of 126 / 3 / 1.

Representative visual evidence

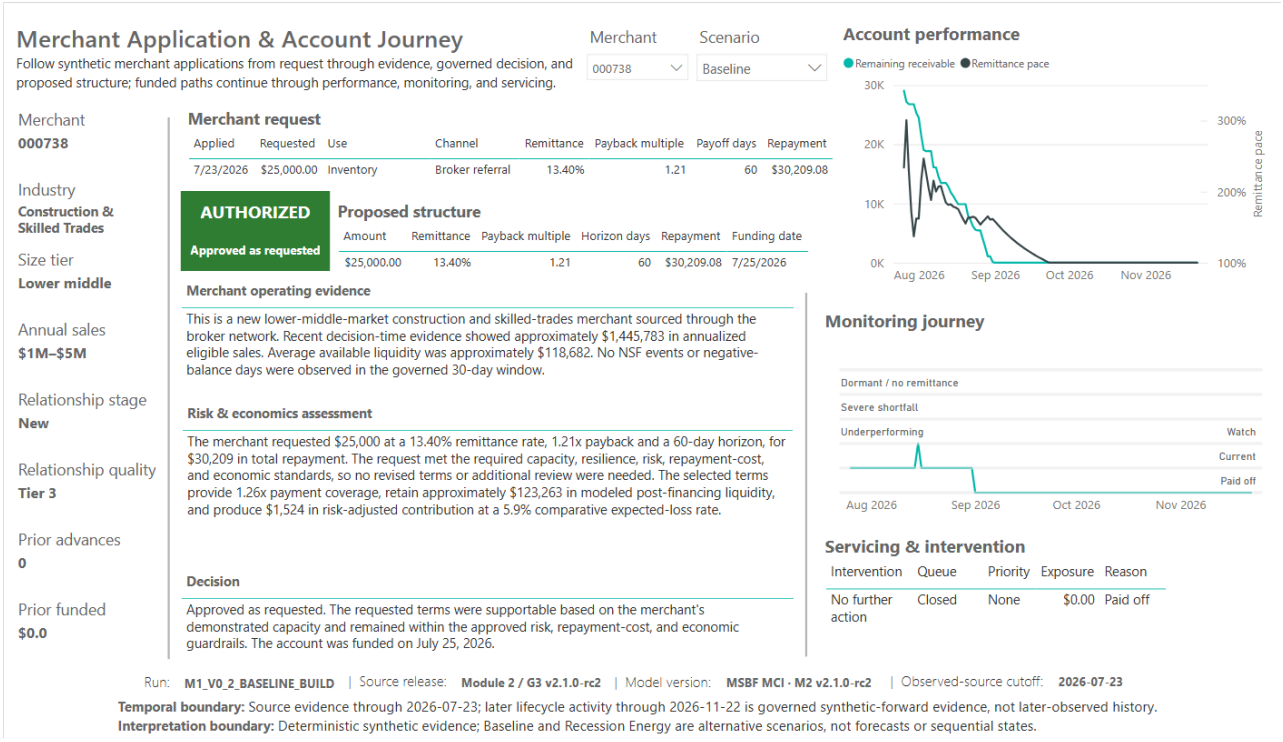

Figure: P03 738 Baseline

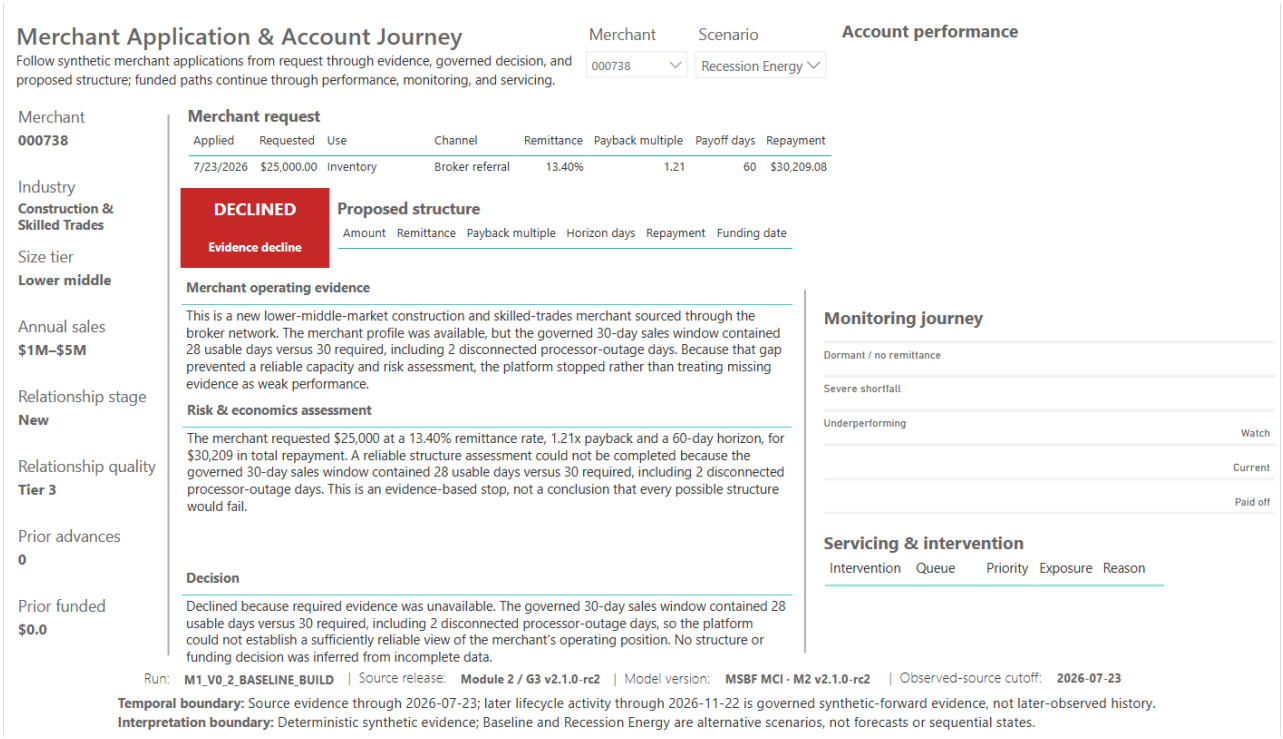

Figure: P03 738 Recession Energy

The full focused P03 evidence set covers all seven governed outcomes and material review, evidence, no-feasible, stress-floor, and hard-stop branches.

14. P04 servicing and certification validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-001	M2.6-M2.10 rows and unique keys	130 / 130 each stage	130 / 130 each stage	PASS	P04 QA result 1

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-002	M2.7 distribution	126 / 3 / 1	126 / 3 / 1	PASS	P04 QA result 2

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-003	M2.8 distribution	126 / 3 / 1	126 / 3 / 1	PASS	P04 QA result 3

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-004	M2.9 distribution	126 / 1 / 3	126 closed / 1 retry / 3 review	PASS	P04 QA result 4

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-005	M2.10 distribution	126 closed / 1 active / 3 review	Exact	PASS	P04 QA result 5

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-006	Baseline KPIs	4; $7,823.28; 1; 3; $6,061.03; 0	Exact	PASS	P04 QA result 6
VAL-P04-007	Recession Energy KPIs	All operational exception measures 0	All 0	PASS	P04 QA result 6

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-008	098/112/312/749/264 chain	Expected states observed	Exact representative cases	PASS	P04 QA result 7

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P04-009	Final P04 alt text, tab order, endpoint and servicing tooltips	Implemented; servicing burden removed from public tooltip	Approved P04 final design	PASS	P04 alt-text, tab-order, and final tooltip captures

Baseline endpoint

Measure	Validated value
Requiring attention	4
Attention exposure	$7,823.28
Active servicing	1
Review holds	3
Certified exposure	$6,061.03
Unresolved exceptions	0
Endpoint status	99 Paid off / 4 Severe shortfall
Servicing disposition	1 Reassessment / 3 Review hold

Recession Energy endpoint

- 27 Paid off;
- zero attention paths;
- zero attention exposure;
- zero active servicing;
- zero review holds;
- zero certified ending exposure;
- zero unresolved exceptions.

Representative-path regression

Merchant	Validated chain
098 Baseline	Severe shortfall -> targeted outreach -> governance review -> execution review hold -> controlled review
112 Baseline	Severe shortfall -> targeted outreach -> governance review -> execution review hold -> controlled review
312 Baseline	Severe shortfall -> targeted outreach -> governance review -> execution review hold -> controlled review
749 Baseline	Severe shortfall -> temporary remittance review -> setup ready -> active servicing -> active reconciled
264 Baseline	Paid off -> no further action -> no setup -> no execution -> closed stable

Merchant 749 additionally validates seven payment events, $1,762.25 processed, one return, one retry, reconciliation after retry, and $2,937.12 certified exposure.

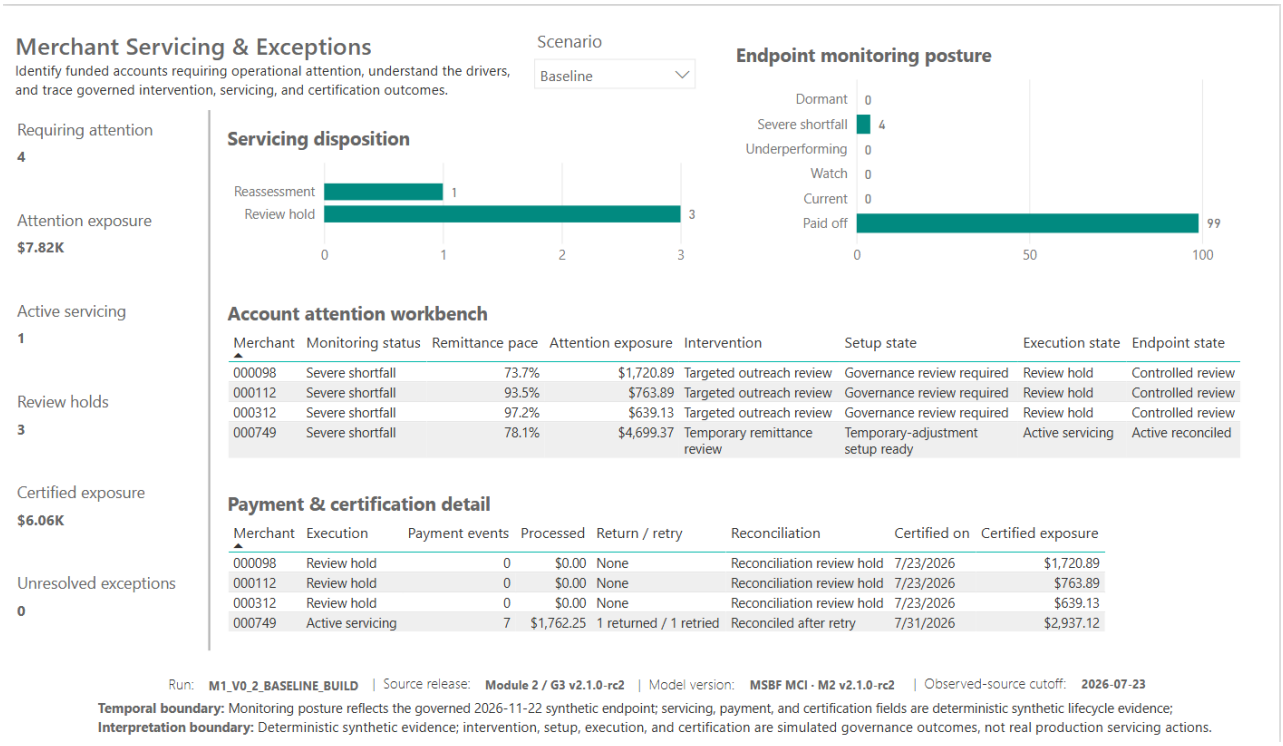

Figure: P04 Baseline

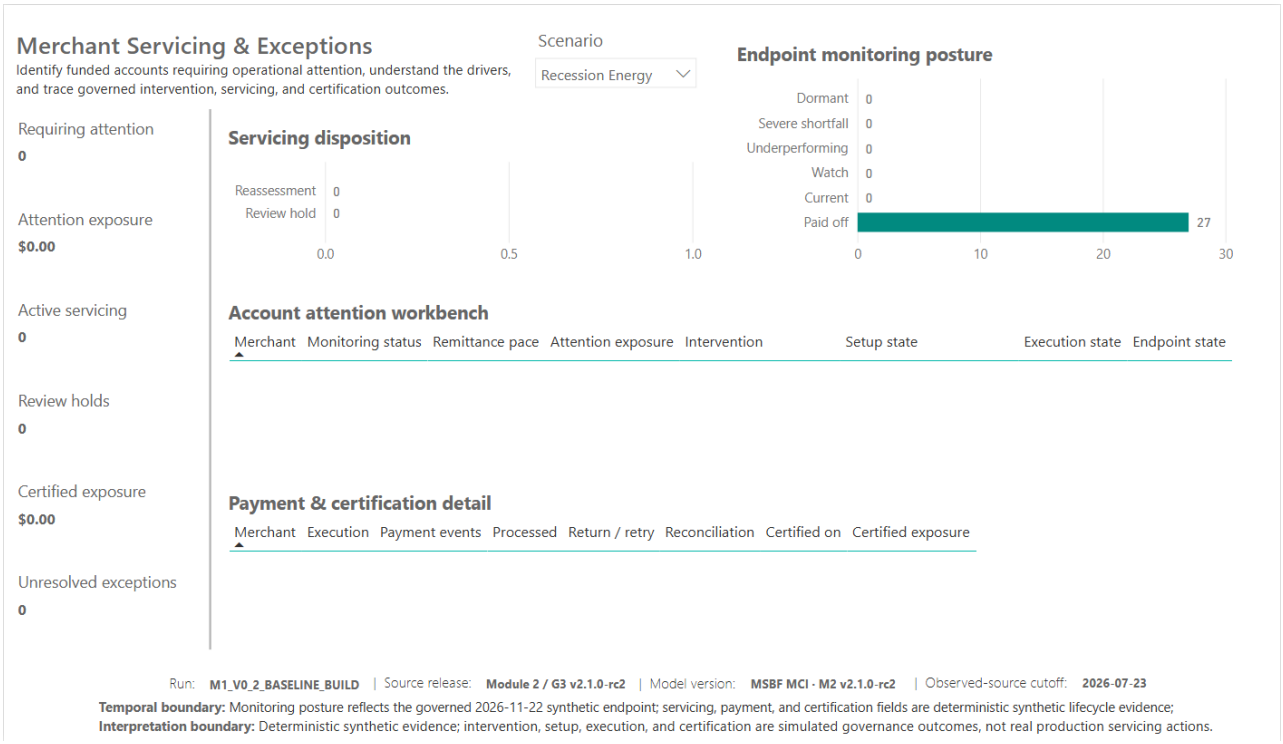

Figure: P04 Recession Energy

15. Accessibility validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-ACC-001	P01-P04 title/KPI/chart/table alt text	Implemented and evidenced	Implemented	PASS	Owner alt-text captures

Control ID	Control	Observed	Expected	Status	Evidence
VAL-ACC-002	Logical tab order P01-P04	Implemented and evidenced	Implemented	PASS	Owner tab-order captures

The owner evidence demonstrates substantive alt text and logical tab order across P01-P04. Dynamic KPI alt text is used where it materially improves comprehension. Slicers and visible footer text intentionally use native labels rather than redundant custom alt text.

The final P04 servicing tooltip was reviewed after removal of the unexplained servicing-burden metric. It now provides concise axis context, full queue wording, account count, and certified exposure.

16. Interaction validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-INT-001	Scenario isolation and visual interactions	Observed as designed	As designed	PASS	Owner interaction and scenario captures
VAL-INT-002	P04 workbench-to-detail selection behavior	Merchant 098 and 749 selections isolate the lower detail table while page posture remains stable	Approved workbench-detail interaction	PASS	P04 filtered owner captures

Validated interactions include:

- scenario isolation;
- P01/P02 industry and acquisition-source segmentation;
- observation-date/period behavior;
- P03 merchant/scenario case resolution;
- P04 workbench selection filtering only the lower detail;
- valid empty-state behavior under Recession Energy.

17. Temporal and interpretation-boundary validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-TMP-001	Observed-source cutoff	2026-07-23	2026-07-23	PASS	Visible footer and source controls
VAL-TMP-002	Synthetic-forward lifecycle endpoint	2026-11-22	2026-11-22	PASS	P01-P04 footers and lifecycle evidence

The report visibly communicates:

- observed decision-time source evidence through 2026-07-23;
- deterministic synthetic-forward lifecycle evidence through 2026-11-22;
- alternative governed scenarios rather than forecasts or sequential states;
- no real production servicing, payment, or adverse-action execution.

18. Evidence and publication-package validation

Control ID	Control	Observed	Expected	Status	Evidence
VAL-EVD-001	Owner evidence inventory and duplicate-hash scan	142 files / 15,519,282 bytes / 0 duplicate-hash groups	Complete, nonduplicated owner evidence inventory	PASS	OWNER_EVIDENCE_MANIFEST and direct hash analysis
VAL-EVD-002	Focused presentation-capture inventory	94 presentation-focused captures across P01-P04	Publication-candidate visual evidence separated from internal QA evidence	PASS	Owner evidence folder organization and manifest

The owner-evidence package contains 142 files totaling 15,519,282 bytes and no duplicate-hash groups. The focused presentation area contains 94 curated Power BI captures, while raw QA/accessibility/interaction evidence remains separately identifiable as internal support.

Publication-support payload

Control ID	Control	Observed	Expected	Status	Evidence
VAL-PUB-001	Publication-support payload completeness	PBIX, canonical MD/XLSX/JSON, BRD MD/DOCX/PDF, validation MD/DOCX/PDF, registers, curated captures, manifests, and checksums present	Complete approved publication-support payload	PASS	Publication-support package inspection and payload manifest
VAL-PUB-002	Package path safety, archive integrity, clean extraction, and manifest reconciliation	CRC PASS; clean extraction PASS; zero unsafe, duplicate, case-fold-colliding, symlink, or encrypted paths; manifest/SHA256 reconciliation PASS	All checks PASS; all disallowed-path counts zero	PASS	MANIFEST.csv; SHA256SUMS.txt; ZIP_VALIDATION_REPORT.md/json

The validated package is the final publication candidate for this rc2 scope. The owner-confirmed persistence/nonregression gate is PASS. Package integrity validation does not itself execute GitHub publication.

19. Findings and observations

Finding F-01 - R16 focused correction closed by physical re-scan

Status: CLOSED / PASS **Evidence:** Owner confirmation dated 2026-09-04 that the latest final P01-P04 captures were taken after save, complete Desktop close, and reopen; current PBIX/package designated final. **Disposition:** No further report edits are authorized absent a verified defect or a new controlled release cycle.

Finding F-02 - GitHub publication not executed

Status: PENDING **Impact:** The current package supports publication but does not activate public supersession or claim that the release is live. **Disposition:** Execute through the separately authorized release action.

Observation O-01 - Exact final model inventory

The current measure and column totals are reconstructed from the last exact R4 inventory plus readable overlays and owner-confirmed additions. This is adequate for publication-support documentation when clearly qualified. Exact DMV inventory was not separately recaptured. The qualified R4-plus-overlay inventory remains documented as a nonblocking observation; the physical PBIX and binding inventories remain controlling for publication.

Observation O-02 - P05/P06 excluded

P05 and P06 remain internal candidate pages and are intentionally absent from the client-facing rc2 PBIX. No current public claim should imply that M2.11 strategy analysis is already presented through a completed P05/P06 experience.

20. Release recommendation

Recommendation: ACCEPT AS CORRECTED FINAL PUBLICATION CANDIDATE SUBJECT TO EXPEDITED FOCUSED INDEPENDENT RE-AUDIT; if accepted, proceed directly to controlled GitHub publication.

The P01-P04 report build is accepted as complete and page-frozen. The final persistence/nonregression gate is closed as PASS, and the PBIX/package identities are final for audit/publication handoff.

The remaining controlled release sequence is:

1. independent audit acceptance of this final publication-candidate package;
2. the separately authorized GitHub publication/public-supersession action;
3. post-publication download verification of every hosted asset against the package hash/size register and Windows-native clean extraction.

Appendix A - Validation summary

Status	Count	Meaning
PASS	51	Validated by direct test, automated QA, physical inspection, or approved owner evidence
DEFERRED	0	No remaining deferred validation controls
PENDING	1	Separate controlled publication action
TOTAL	52	Corrected publication-support control population

Appendix B - Full control register

Control ID	Control	Observed	Expected	Status	Evidence
VAL-ACC-001	P01-P04 title/KPI/chart/table alt text	Implemented and evidenced	Implemented	PASS	Owner alt-text captures
VAL-ACC-002	Logical tab order P01-P04	Implemented and evidenced	Implemented	PASS	Owner tab-order captures
VAL-EVD-001	Owner evidence inventory and duplicate-hash scan	142 files / 15,519,282 bytes / 0 duplicate-hash groups	Complete, nonduplicated owner evidence inventory	PASS	OWNER_EVIDENCE_MANIFEST and direct hash analysis

Control ID	Control	Observed	Expected	Status	Evidence
VAL-EVD-002	Focused presentation-capture inventory	94 presentation-focused captures across P01-P04	Publication-candidate visual evidence separated from internal QA evidence	PASS	Owner evidence folder organization and manifest
VAL-GOV-001	R26 G3-v2 controls	70 PASS / 0 FAIL	70 PASS / 0 FAIL	PASS	R26 checkpoint and authority evidence
VAL-GOV-002	R26 certification ID	G3V2_R26_C053DC06 4AB32A4D21864F94	Exact accepted ID	PASS	R26 authority evidence
VAL-INT-001	Scenario isolation and visual interactions	Observed as designed	As designed	PASS	Owner interaction and scenario captures
VAL-INT-002	P04 workbench-to-detail selection behavior	Merchant 098 and 749 selections isolate the lower detail table while page posture remains stable	Approved workbench-detail interaction	PASS	P04 filtered owner captures
VAL-P01-001	P01 public page composition and final release identity	Command center present with KPI, sourcing, decision, industry, endpoint, alert, and evidence sections	Approved P01 page design	PASS	Focused P01 Baseline/Recession captures and binding inventory
VAL-P01-002	Final-observation funded paths and endpoint state	Baseline 103 funded / $1.39M / $7.82K exposure; Recession Energy 27 funded / $344.20K / $0 exposure	Current accepted cohort results	PASS	Focused P01 Baseline and Recession Energy captures
VAL-P02-001	Lifecycle page composition	Receivable runoff, remittance fulfillment, monitoring breadth/severity, and payoff timing present	Approved P02 page design	PASS	Focused P02 Baseline/Recession captures and binding inventory
VAL-P02-002	Observation-period and segmentation behavior	Scenario, industry, acquisition-source, and observation-period interactions evidenced	Approved interaction behavior	PASS	Owner P02 interaction and observation-period captures
VAL-P02-003	Operational-alert diagnostic tooltips	Raw alert conditions, operational alert families, and per-alerted-account context evidenced	Approved tooltip design	PASS	Owner P02 tooltip capture
VAL-P03-001	738 scenario pair	2 rows, both PASS	2 rows, both PASS	PASS	P03 narrative QA result 1
VAL-P03-002	Narrative failures	0	0	PASS	P03 narrative QA result 2
VAL-P03-003	Full narrative inventory	1,500 rows; PASS only	1,500 unique paths; PASS only	PASS	P03 narrative QA result 3

Control ID	Control	Observed	Expected	Status	Evidence
VAL-P03-004	Successor reconciliation failures	0	0	PASS	P03 performance/monitoring QA result 2
VAL-P03-005	738 scenario pair	Baseline 120 monitoring rows; Recession Energy 0 rows	Exact isolation	PASS	P03 performance/monitoring QA result 3
VAL-P03-006	Final P03 application-to-account page composition	Request, decision, proposed structure, three narratives, performance, monitoring, and servicing present	Approved P03 final design	PASS	Focused P03 branch captures and final page evidence
VAL-P03-007	Final P03 alt text, tab order, account-performance and monitoring tooltips	Implemented and evidenced	Approved accessibility/tooltip design	PASS	P03 alt-text, tab-order, and tooltip captures
VAL-P04-001	M2.6-M2.10 rows and unique keys	130 / 130 each stage	130 / 130 each stage	PASS	P04 QA result 1
VAL-P04-002	M2.7 distribution	126 / 3 / 1	126 / 3 / 1	PASS	P04 QA result 2
VAL-P04-003	M2.8 distribution	126 / 3 / 1	126 / 3 / 1	PASS	P04 QA result 3
VAL-P04-004	M2.9 distribution	126 / 1 / 3	126 closed / 1 retry / 3 review	PASS	P04 QA result 4
VAL-P04-005	M2.10 distribution	126 closed / 1 active / 3 review	Exact	PASS	P04 QA result 5
VAL-P04-006	Baseline KPIs	4; $7,823.28; 1; 3; $6,061.03; 0	Exact	PASS	P04 QA result 6
VAL-P04-007	Recession Energy KPIs	All operational exception measures 0	All 0	PASS	P04 QA result 6
VAL-P04-008	098/112/312/749/264 chain	Expected states observed	Exact representative cases	PASS	P04 QA result 7
VAL-P04-009	Final P04 alt text, tab order, endpoint and servicing tooltips	Implemented; servicing burden removed from public tooltip	Approved P04 final design	PASS	P04 alt-text, tab-order, and final tooltip captures
VAL-PHY-001	PBIX ZIP CRC	PASS	PASS	PASS	Direct PBIX testzip
VAL-PHY-002	Unsafe/duplicate/case-colliding paths	0 / 0 / 0	0 / 0 / 0	PASS	Direct PBIX path inspection
VAL-PHY-003	Client-facing visible pages	4	4	PASS	Embedded pages.json
VAL-PHY-004	Hidden diagnostic pages	1	1	PASS	Embedded P02-DIAG page.json

Control ID	Control	Observed	Expected	Status	Evidence
VAL-PHY-005	Client-facing PBIX identity, size, and SHA-256	MSBF_Merchant_Credit_Intelligence_M2_v2.1.0-rc2.pbix; 27,635,305 bytes; ca46e855...94e4	Exact corrected client-facing release candidate	PASS	Direct project(2).zip and corrected PBIX hash inspection
VAL-PUB-001	Publication-support payload completeness	PBIX, canonical MD/XLSX/JSON, BRD MD/DOCX/PDF, validation MD/DOCX/PDF, registers, curated captures, manifests, and checksums present	Complete approved publication-support payload	PASS	Publication-support package inspection and payload manifest
VAL-PUB-002	Package path safety, archive integrity, clean extraction, and manifest reconciliation	CRC PASS; clean extraction PASS; zero unsafe, duplicate, case-fold-colliding, symlink, or encrypted paths; manifest/SHA256 reconciliation PASS	All checks PASS; all disallowed-path counts zero	PASS	MANIFEST.csv; SHA256SUMS.txt; ZIP_VALIDATION_REPORT.md/json
VAL-REL-001	Persistence/ nonregression closure including bounded post-audit P04 correction	Pre-audit full save/close/reopen PASS; corrected PBIX saved with unchanged DataModel and unchanged non-filter visual payload; owner observed no visual/result change and approved reuse of existing captures without re-capture	Current corrected PBIX persisted and no output regression from localized filter removal	PASS	Persistence closure receipt R2; focused correction member diff; owner no-recapture signoff; physical scan
VAL-REL-002	GitHub publication / public supersession	NOT EXECUTED	Separate authorized release action	PENDING	This package supports but does not execute publication
VAL-REL-003	Visible product/model identity	MSBF Merchant Credit Intelligence / MSBF MCI - M2 v2.1.0-rc2	Owner-approved market-facing identity	PASS	PBIX filename and P01-P04 final footers
VAL-RPT-001	Page / visible / hidden / visual / binding inventory	5 pages / 4 visible / 1 hidden / 96 visuals / 221 bindings	Exact current PBIX inventory	PASS	Embedded PBIX report definition extraction

Control ID	Control	Observed	Expected	Status	Evidence
VAL-SEM-001	Successor-or-shared physical visual-reference coverage and predecessor-fact exclusion, including filterConfig	96 visuals; 293 physical field-reference occurrences; 26 filterConfig rows; 3 active predicates; 0 predecessor-fact references / 0 predecessor-fact filter rows	0 predecessor fact references across all physical visual JSON	PASS	CURRENT_PHYSICAL_VISUAL_REFERENCES_R7; CURRENT_PHYSICAL_FILTER_REFERENCES_R7; PHYSICAL_VISUAL_REFERENCE_SCAN_SUMMARY_R7
VAL-SEM-002	Model inventory qualification	R4 exact base 55 tables / 1,804 columns / 316 measures / 55 relationships; R5 estimated 1,807 columns / 349 measures	Exact base plus explicitly qualified readable/owner additions	PASS	R4 canonical register plus R5 query overlays and owner changes
VAL-SRC-001	Application-scenario paths	1,500	1,500	PASS	R1DimApplicationScenario
VAL-SRC-002	Daily monitoring rows / paths / days	15,600 / 130 / 120	15,600 / 130 / 120	PASS	P03 operational QA result 1
VAL-SRC-003	M2.6 intervention distribution	126 / 3 / 1	126 / 3 / 1	PASS	P03 operational QA result 4
VAL-TMP-001	Observed-source cutoff	2026-07-23	2026-07-23	PASS	Visible footer and source controls
VAL-TMP-002	Synthetic-forward lifecycle endpoint	2026-11-22	2026-11-22	PASS	P01-P04 footers and lifecycle evidence
VAL-COR-001	R16 audit finding bounded to one P04 visual	IA-D-R16-PBI-001 HOLD identified exactly two stale predecessor filters; broad remediation not required	Localized correction only	PASS	Owner-provided R16 audit decision and focused correction authorization summary
VAL-COR-002	Authorized stale filters removed from Payment & certification detail	Two predecessor predicates absent; R26 P04 Requires Attention Flag = 1 retained	Two predecessor filters removed; successor attention filter retained	PASS	Direct corrected visual filterConfig inspection
VAL-COR-003	Complete physical visual JSON scan including filterConfig references	96 visuals / 293 refs / 26 filterConfig rows / 3 active predicates / 0 predecessor fact refs / 0	Predecessor fact references across all physical visual JSON = 0	PASS	CURRENT_PHYSICAL_VISUAL_REFERENCES_R7; CURRENT_PHYSICAL_FILTER_REFERENCES_R7; PHYSICAL_VISU

Control ID	Control	Observed	Expected	Status	Evidence
		predecessor fact filter rows			AL_REFERENCE_SCAN_SUMMARY_R7
VAL-COR-004	Correction boundedness and semantic nonregression	DataModel unchanged; target and endpoint-monitoring visuals unchanged outside filterConfig; only 4 PBIX members changed	No semantic-model or visual query/layout change beyond authorized filter metadata correction	PASS	FOCUSED_CORRECTION_PBIX_MEMBER_DIFF_R7; direct normalized JSON comparison
VAL-COR-005	Owner visual-output equivalence and no-recapture signoff	Owner observed no visual/result change and expressly approved reuse of existing P04 captures without re-capture	No re-capture required when bounded correction does not change displayed results	PASS	Owner attestation dated 2026-09-04; existing final P04 captures retained
